Today, AutoCAD is a leading provider of 3D cad-automation solutions, used in architecture, civil engineering, construction, industrial design, landscape design, planning, surveying, telecommunications, and transportation. The industry standard for 3D cad-automation software, AutoCAD is used by approximately 3 million people and institutions in over 180 countries. According to Autodesk, AutoCAD is the most widely used program for computer-aided design, drawing and drafting. It is used in over 70,000 organizations, including companies, government agencies, universities, and academic institutions. History Autodesk began developing AutoCAD in 1982. The first version of AutoCAD (Version 1.0) was released in December 1982. A beta version of AutoCAD was released in January 1983. In 1983, the first version of AutoCAD was available for a \$600 price tag and was a revolutionary product, because it allowed users to create three-dimensional drawings using the computer rather than on paper or film. It also allowed the users to "unlock" the drawing and enhance it with geometry, annotations, etc. Original Version 1.0 Release However, as the software was in use by a few selected companies, it was referred to as "the little CAD company that could". In 1985, Autodesk won a contract to develop a CAD program for the U.S. Department of Transportation. The software, known as the Architecture, Engineering, and Construction (AEC) program, was intended to streamline the process of designing and drafting projects. It had a graphical interface with a mouse, the ability to import and export files, and the ability to view and print projects. Because of its success, Autodesk released the software for sale to other industries. The AutoCAD line was renamed to Architectural Desktop in 1986, followed by Civil Desktop in 1988 and Design Desktop in 1990. Version 1.3 was released in 1988, which included a snap-to feature and a "menu bar". Version 2.0 Release In 1991, Version 2.0 was released, and it supported the OpenGL graphics standard. AutoCAD also introduced the "rainbow effects" that allow users to simulate light and shade. Version 2.0 Release Version 3.0 Release Autodesk continued to improve on AutoCAD with Version 3.0 in 1991, and that was the last version

Dynamic markup is a feature of AutoCAD R14, introduced in 2011 and released for 2012. Dynamic markup refers to the ability to create, insert, manipulate, edit, and delete objects dynamically, without using the object hierarchy. Dynamic markup for AutoCAD is based on its XML-based markup system. History In the 1980s, the original version of AutoCAD was called AutoCAD System Program (ACP). It was available only for DOS and was written in 6502 assembly language. Later, ACP was reimplemented in the much less efficient 8086 assembly language. This version was named as AutoCAD 9.0. ACP was originally developed by NCR Corporation, and it was used mainly to create AutoCAD drawings. During its original development, it supported only the first four drawing types: 1/4", 1/2", 1" and 2" drawings. Later, it supported drafting and layouts. However, the technology was not free of problems. At that time, the only way to draw and edit drawings in AutoCAD was to create graphics in a graphics editor and then transfer the graphics to AutoCAD. This was a tedious process. Also, adding objects to the drawing and editing them was very difficult, because drawing and editing an object required deleting or re-drawing its base lines and its boundaries, and then restoring the base lines and boundaries of the object. In the late 1990s, as the demand for AutoCAD grew, NCR Corporation decided to provide a free version of AutoCAD, not only to the commercial customers, but also to the public. This new version was released for Microsoft Windows and allowed users to create, insert, and edit objects. There was a problem with AutoCAD and Windows, though: Windows had no graphics editor. NCR Corporation introduced AutoCAD's new technology, called XML, which allowed the drawing to be created and edited on a desktop computer, then the XML files were transferred to AutoCAD. This new technology revolutionized the architecture of AutoCAD. In 1998, NCR Corporation decided to stop developing the software for Windows computers, and it was no longer free. In 2001, Autodesk, Inc. acquired NCR Corporation, and then Autodesk produced a new version of AutoCAD to run on Windows. This version was called AutoCAD 2001. Autodesk changed the name of the product to AutoCAD. AutoCAD was originally created only a1d647c40b
