Electronic systems AutoCAD is used as a major internal component by Autodesk employees to design aircraft, spacecraft, power plants, and many other products. Within the Autodesk Corporation, AutoCAD is the de facto standard for technical drawings, and is used for visualization of product design intent, data for the purposes of validation, data exchange with Autodesk and third-party software, and as a requirement for programming by Autodesk's employees. The architectural visualizations on television series such as the CSI series were created with Autodesk's software. AutoCAD was first used in automobiles by the Chrysler Corporation in the early 1980s, as a part of its Advanced Product Development System. AutoCAD was also used on the Metro transit vehicle by the German company Siemens, and by the Dutch company Katoen Natie. Later, the Japanese company Toyota adopted it as its standard modeling tool. Licensing On March 9, 2007, Autodesk announced plans to launch a new licensing strategy that would affect the existing LT and LT+ perpetual license customers and those who wanted to purchase or upgrade to an LT or LT+ license. The change would require existing customers to purchase a new perpetual license at a reduced price or purchase a new upgrade, which provides the same functionality, at a higher price. The existing perpetual license customers would not be able to upgrade their license or get a similar perpetual license at a reduced price. The new perpetual license would have a seven-year warranty; the original LT or LT+ perpetual license only had a five-year warranty. a1d647c40b
