I purchased a matlab license that is for 2013a, can i make a shortcut to 2013a instead of 2014a. What version of Matlab can I use in the 2013 version? r2014a or greater. . Installed MATLAB in to my machine and now I have 2 other versions of Matlab. . The license key files are located in %MATLAB_ROOT%\R2013\bin\license. Where does MATLAB put license files during file installation?The location of your license file depends on your license type and operating system. License files are stored in the "licenses" folder within the MATLAB. You will find it in the %MATLAB_ROOT%\R2014a\bin\license folder. . Answer: Matlab activation key. No, it's not. At all. Indeed, the whole thing is counter to the premise of open-source software, and is one of the reasons why Linux is considered a better option over Windows. The reason Ubuntu is unable to just install over Windows is because it is a fresh install. That means Windows will delete your old Ubuntu and its boot files. If you install on top of Ubuntu you can select it from the boot menu. The reason you see it on the Live CD is Ubuntu is trying to trick you. When it's installed on your system and you run "sudo apt-get install ubuntu-desktop" there is nothing to delete. The reason that you cannot immediately access it like this is because you have a very limited user. If you log in as a user you have full rights. If you log in as root it will have full rights also, but is a much bigger security problem if you ever need to do system admin things. You can install a bootloader on your Windows drive to achieve this. If you already have dual boots and want to keep that you will need to setup your boot options so that Windows and Ubuntu show up the same. You will then need to have both your Ubuntu and Windows update in case Ubuntu have a later version of a software that is required. Should I install Ubuntu as "purely default" or with any optional addons? It's up to you but any decent Ubuntu version should come with both optional and required components. Only addons to which

Download the matlab 2014a license file for offline use. A license file is only needed on the machine that the license was originally purchased. After the first time that a license file is activated, a license file is never needed again. If a license file is never needed it can be deleted from the machine. Note: you can only install MATLAB on a single machine with a valid license file. A valid license file is the file that you get when you purchase a valid, specific license file for a specific amount of time from your MATLAB Account Homepage. It may be the installer file which you downloaded or the desktop shortcut which you installed. To activate an original MATLAB license file: 1) Go to the MathWorks Account Homepage and find the license file that you downloaded for the license that you purchased. 2) Copy the file to your offline. If the original license file could not be found then it will not be found when it is automatically looked for in step 2. A valid license file is a valid license file as defined above. Activate an On-Premises MATLAB License File on Google Cloud Platform (for MATLAB R2018b and above) Go to your MathWorks Account Homepage. Select From My MathWorks Account. This will open your MathWorks Account Homepage in a new browser tab. Locate the license file that you would like to. Click the Google Cloud Platform button. Google Cloud Platform will download the file for you and the File Installation Key will be displayed for the license that was activated. The File Installation Key is the file that will be copied to the offline. To activate an On-Premises MATLAB license file, you only need to copy the File Installation Key to the offline. August 5, 2019 Offline Installation is now supported on Windows Prerequisites To use MATLAB offline, you need to download the installer file (an ".exe" file) for MATLAB and the File Installation Key (the "FIK") for the license that you purchased. You can download them from your MathWorks Account Homepage. Using MATLAB offline To use MATLAB offline, you need to download both the installer and the license file. The installer file contains a MATLAB application that installs MATLAB and the FIK. The File Installation Key (FIK) is a piece of information that will be used when you activate the license file, so it is needed for the license file to be 570a42141b
