History and Version History In 1994, the first version of Photoshop was released and subsequently become the standard for graphic designers and multimedia creators. Photoshop was originally based on the Macromedia Freehand graphics program, which is now named Flash. The first version of Photoshop was a

rip-off of another piece of Macromedia software, Illustrator. Originally, Illustrator was the only Macromedia program that was capable of creating vector graphics. Vector graphics are digital graphics that are composed of shapes rather than pixels. Adobe created Photoshop to create raster graphics, which are composed of dots. One of the first milestones in the history of Photoshop was its release as a Microsoft Windows application. Windows is the operating system of the Microsoft Windows family of products, including Windows 7,

Windows XP, and Windows Vista. This milestone was accomplished in May 1995. As Photoshop grew in popularity, Adobe released multiple additional iterations of Photoshop. Each version was minor and usually included new features, but also usually had a bug and subsequent iteration that fixed it. Photoshop 5 came with 20 bugs, 6 came with 40 bugs, and so on. During the four years of version 5, Photoshop kept upgrading but kept mostly the same features, and you could even start using Photoshop without even realizing you were using version 5. It

was essentially the same program, but with new features. During the years when version 6 was in beta, Adobe had a policy that a version could not be released if it was unfinished. However, under pressure from users, Adobe was forced to release version 6. The first version of Photoshop that was labeled 6 was Photoshop 6 and was released in December 2000. This version of Photoshop included an intelligent tag system that made it easier to manage projects. Photoshop 7, released in August 2001, included an Adobe Camera Raw development kit, which

is an image-editing add-on that allows users to edit and repair RAW images. This was the first edition of Photoshop to integrate into the image-editing software Quick Books. Quick Books was a point of contention for many people because it was included with Photoshop at that time. Not everyone was happy with it. After that, Adobe released Photoshop 8 in March 2002.

Photoshop 8 was the first version to have a dedicated program, known as Bridge, which was designed to replace some of the features in the system. Photoshop 9 was released in

November 2003. In that version, the program added Edge Layers

It has an extensive feature set and many professional uses. It is a professional suite and can be very expensive to use. There are a number of free and open source alternatives to Adobe Photoshop. Adobe Photoshop Alternatives These Photoshop alternatives offer the same image editing functionality but

with a simplified user interface. Adobe Photoshop Free is one of the most popular alternatives to Photoshop. It is a professional image editor and a viable alternative to Photoshop. It has a more simplified user interface and most of the features of Adobe Photoshop Free.

Q: Prove that $\cos(3^\circ) = -1$ without trigonometric tables. Prove that $\cos(3^\circ) = 1$ or $\cos(3^\circ) = -1$. I know that there are many trigonometric identities, however I know them from book examples but not all. I know that for any 90 degree angle we can use "double right angled cosine" and "double angle cosine" with two known angles and one known cosine. It was easy for me with $\cos(90^\circ) = 1$, but now I am stuck for cosine of 3 degrees. A:

Since $45^\circ = \frac{2\pi}{3}$ and $90^\circ = \frac{2\pi}{6}$,

$$\begin{aligned} \cos(3^\circ) &= \cos(90^\circ - 3^\circ) \\ &= \cos\left(\frac{2\pi}{3} - 3^\circ\right) \\ &= \cos\frac{2\pi}{3}\cos 3^\circ - \sin\frac{2\pi}{3}\sin 3^\circ \\ &= \cos 3^\circ - \sin 3^\circ = -1. \end{aligned}$$

A: $\cos(3^\circ) = 1$

will be true if and only if

$$\cos(3^\circ + k \cdot 90^\circ) = 1$$

for any integer k .

$\cos(3^\circ) = 1$ is obvious because the angle is multiples of 90° .

$\cos(3^\circ + k \cdot 90^\circ) = 1$ is true iff $\cos(3^\circ + k \cdot 90^\circ)$

$$\cos^2(3^\circ + k \cdot 90^\circ) + \sin^2(3^\circ + k \cdot 90^\circ) = 1$$

i.e. $\cos^2(3^\circ + k \cdot 90^\circ) - \sin^2(3^\circ + k \cdot 90^\circ) = 1$

\$ i.e. $\cos(2(3$
