AutoCAD is the most widely used commercial CAD application in the world. As of December 2013, AutoCAD is used by more than 35,000 professionals and consultants, and by 10,000 active schools in over 90 countries, including over 15,000 students. AutoCAD is the de facto standard for producing technical drawings for the construction, manufacturing, maintenance and repair industries. AutoCAD also makes it easy for designers to create precise, accurate technical drawings for design purposes. The current version of AutoCAD is AutoCAD 2018. It can be downloaded from Autodesk's website. The latest official release is version 2017, also available from Autodesk's website. AutoCAD 2017, unlike AutoCAD 2018, does not have a subscription model. Instead, users are required to purchase licenses of AutoCAD and related products through the Autodesk website. AutoCAD is one of Autodesk's most profitable programs. According to the 2012 Autodesk annual report, AutoCAD had annual revenue of about \$800 million in 2012. With the help of AutoCAD, Autodesk generated \$10.8 billion in revenue in 2012, more than 10% of Autodesk's overall revenue. 1. How AutoCAD Works Before AutoCAD, commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. Unlike with most CAD programs, the workstation had a specific graphics display and a complete set of drawing-related tools that were all controlled by the CAD operator. With AutoCAD, the user works at a single display, which can display several drawings at the same time. The user can work with a drawing on one monitor and switch to another drawing on the same monitor, or switch to another monitor to view a different drawing. This allows the user to simultaneously work on multiple drawings. Although the user still works on a separate display, the only piece of hardware that is controlled by the CAD operator is a graphics tablet. With AutoCAD, the operator uses the tablet to move a pencil cursor around the display. AutoCAD automatically detects which tool is closest to the tablet cursor, and redraws the drawing in the area of the tool. By default, AutoCAD automatically selects the closest tool to the tablet cursor. A CAD operator works at a single display,

We examined whether detection of a protein differentially expressed on tumor cell surfaces might allow for the identification of circulating tumor cells (CTCs) in the blood of cancer patients. Tumor cell lines were used to culture normal human vascular endothelial cells (HUVECs). HUVECs were immunostained with fibronectin (FN) and CD105 antibodies. HUVECs were also exposed to cytokines and growth factors, and their expression of FN was examined by immunostaining. Intracellular signal transduction pathway and cell proliferation were examined in the presence of cytokines and growth factors ca3bfb1094
