Six neuroscientist designed highly replayable brain training exercises will earn the player precious hints to help solve the more difficult puzzles. Where the game was made: Development began in February 2018 with production and game design being the main activities. The game was built on engine Unity. Who is behind the game: Big Brain Wolf was made by me, a game developer and former professional chef, but the main focus of this project was on the game design and the game development. I have been involved in a lot of games in the past, but this was my first solo project. What the game would not be without: I did all the game design, I worked on the story, characters and game concept. I also wrote the script. I also programmed and coded most of the game, animating, creating sounds and music and designing the whole game graphics. I also worked on the artwork. Why should we care about the game and why is there even a game about it?: Big Brain Wolf is a funny and immersive experience that explores the human brain. It is also one of the first games to explore the importance of mental exercise. The game is playful and promotes physical activity, the game also exercises the player's mind! I created this game to give a fun and educational twist to games that currently take an excessive amount of your time and play time.// Copyright 2011 Google Inc. ## **What's new in Big Brain Wolf:**

**Big Brain Wolf is a single-player puzzle video game developed by American indie studio NerdRage, in which the player solves puzzles in six levels and completes three worlds. It focuses on forming groups, trying to guide them to the exit, and clearing levels. It was released for Microsoft Windows, macOS, Linux and Nintendo Switch on July 25, 2018. Gameplay In Big Brain Wolf, the objective of the player is to guide characters through a series of puzzles, and clear all of the objects on the screen, while also effectively guiding the player's party and communicating with them. The game takes place over a cycle of six optional levels that the player can play through in a non-linear fashion, with three optional worlds in addition to the standard introductory and end levels. In the game, players control a team of three diverse characters to solve puzzles. The game supports two to six player co-op through Nintendo Switch. Every player starts out with an AI-controlled character, who the player is introduced to and is responsible for guiding on their own, after which the player is free to move to play with any of the three other supported player characters, although their AI follows what's tried in the other player's team. In addition to playing with other player characters, players can also take control of one of six custom characters with unique skills. The game's puzzles are composed of three main types: moving, acting, and thinking. Moving puzzles consist of moving an object from one position to another within a grid, as many times as specified within the puzzle. Acting puzzles require characters to physically take control of objects while they're within reach of a puzzle's exit point. Thinking puzzles require players to take control of objects while they're out of reach, put them on tilt in another character's grasp, or otherwise direct them using switches and levers. While each of these puzzle types have their own difficulty, players who have completed the primary puzzles in each world have access to harder challenges in the form of secret puzzles. At the end of the game, the player can save a character that they have guided and then take control of that character again, unless they earned a hollow medal for completing the game, in which case the save-points become inaccessible. In addition, players can save their progress and turn the game off; to replay the game without having previously completed it, the player has to choose a character that they have already played through and continue through the standard end-game structure**
