Customer reviews great app 15 January 2013 I needed a simple text editor to do some simple text manipulation. I loved the last one I tried (PerlPad) and had hoped this one would work. I used it for a little while but found it didn't have all the features I wanted, plus it took up a fair amount of space on my drive, something I could not tolerate in the long run. A: Can any one easily lose you're data in a text file? B: Very, very easily. C: I agree. My suggestion: A text file editor that you can type into that won't overwrite your data easily. And one that is light on memory. And that you can fold line. And all the features of PerlPad with some. Like it I love this app. I wish it were free. It doesn't do anything fancy, but it does what I need. No fancy UIs. Just plain simple text editing.
