The following tips should help you get the most out of Photoshop: Never enter images into a Photoshop file. There are many situations where you can instead enter your files into a program such as Kodak Photo CD, Canvas Size (Windows and Mac), or GIMP (Gimp.org). You can even use the Auto Save feature for PS Elements. If you plan on using the File > Save for Web & Devices command, make sure that you have a compatible Internet browser installed on your computer. Internet Explorer 8 is recommended. For information on setting up a compatible browser, see Book I, Chapter 4. The new Photos feature in Photoshop is a great way to ease your memory into this workflow. For example, if you drag a photo into the Photos library, you can create a new file from a photo for use in a print project. From there, you can easily upload the file to a server for printing. On a Mac, if you go to File > Automate, you can create a sequence of steps to perform often or even a workflow. For more information about creating a workflow, see Book II, Chapter 4. It's easy to move image or text layers in Photoshop — no need to restack them in separate layers to create a new layer stack. To move a layer, you can hold down the Ctrl (Windows) or key (Mac) while dragging. To copy a layer, see the section "Copying images and text." It's easy to add a duplicate layer. Simply hold down the Ctrl (Windows) or key (Mac) while you drag the layer in question. You can also duplicate multiple layers at once. It's easy to resize layers. You just need to press the Ctrl (Windows) or key (Mac) while dragging the layer. You can also resize image and text layers and even change an entire image's size. For more information on resizing, check out the section "Resizing images and text," later in this chapter. You can easily crop a layer's contents. Simply drag the unwanted portions of the layer while holding down the Shift key (Windows) or Option key (Mac). To select a portion of the layer, you can also use the Select by Color tool to select a portion of the layer's contents. It's easy to create custom brushes for Photoshop's new Liquify filter. Just select a brush from the Brush panel (Windows) or Brush category

Cobalt(iii) salts were found to react with Criegee intermediates, including propargyl alcohol (6) and acetonitrile and beta-O-C(6)H(6) (15), with formation of new organometallic products [Co(eta(5)-C(5)R(5))(2)][B(C(6)F(5))(4)] (R = (i)Pr, 1a, (t)Bu, 1b). The compounds were characterized by spectroscopic methods including NMR, IR, and UV/Vis spectroscopy. The cobalt complexes are air-stable. These reactions are of importance, as cobalt is ubiquitous as well as interesting, where it exhibits

A comparison of the pharmacoeconomic impact of liothyronine (Triaster) and levothyroxine (Synthroid) monotherapy in patients with new onset thyroid disorders. Hyperthyroidism (H-T2) and hypothyroidism (H-T1) are common disorders that can result in serious consequences if left untreated. While both forms of thyroxine replacement therapy are effective in terms of controlling clinical symptoms and maintaining serum thyroid hormones to normal ranges, many patients continue to be undertreated. This in turn has a significant impact on the overall cost of care for the patient as well as society. To assess the pharmacoeconomic impact of levothyroxine monotherapy on both a cost-per-patient and cost-per-unit basis in patients with newly diagnosed H-T1 and H-T2. Cost-minimization analysis using as the base-case a 24-week scenario. Multicenter model of disease management, including both direct and indirect costs. The total healthcare costs per patient were significantly greater for those patients receiving l-thyroxine monotherapy compared with patients receiving liothyronine monotherapy ($15,091 vs $13,598; P =.0002). Cost-per-unit was also significantly lower for patients on liothyronine monotherapy ($13.71) compared with patients on l-thyroxine ($21.07). This model demonstrated that overall costs of care were reduced by 14.67% if liothyronine monotherapy was instituted. Cost-per-unit was reduced by 16.75%. When modeling the care of newly diagnosed H-T1 and H-T2 patients with liothyronine monotherapy, this model suggests that the benefits of the cost savings not only outweigh the impact on patient and society but that it leads to net cost savings.Improvement of the sensitivity to oxidative stress of cells isolated from pig aorta. The identification of the mechanism(s) of chronic oxidative stress at a molecular level has remained elusive. The present study shows that cells isolated from porcine aorta have an improved ability to cope with an oxidative challenge as compared to cells isolated from healthy human aorta. The human cells were more resistant to low concentrations of H_2O_2 as compared to the porcine cells. The oxidative response was significantly better for the porcine cells as compared to human cells at high concentrations of H_2O_2./* SPD
