But when I use the same query three times on the same game, it returns nothing. { game(id: 1) { points gameId name } } { game(id: 1) { points gameId name } } { game(id: 1) { points gameId name } } What am I doing wrong? A: Variables in GraphQL are not the same as in a normal query. In a query, the variables will be replaced with the actual value. But in a GraphQL mutation, the variables are not replaced. For a mutation, you must define a new variable for each iteration. { game(id: 1) { points gameId name points gameId name } }
